

OpenBlue Healthcare

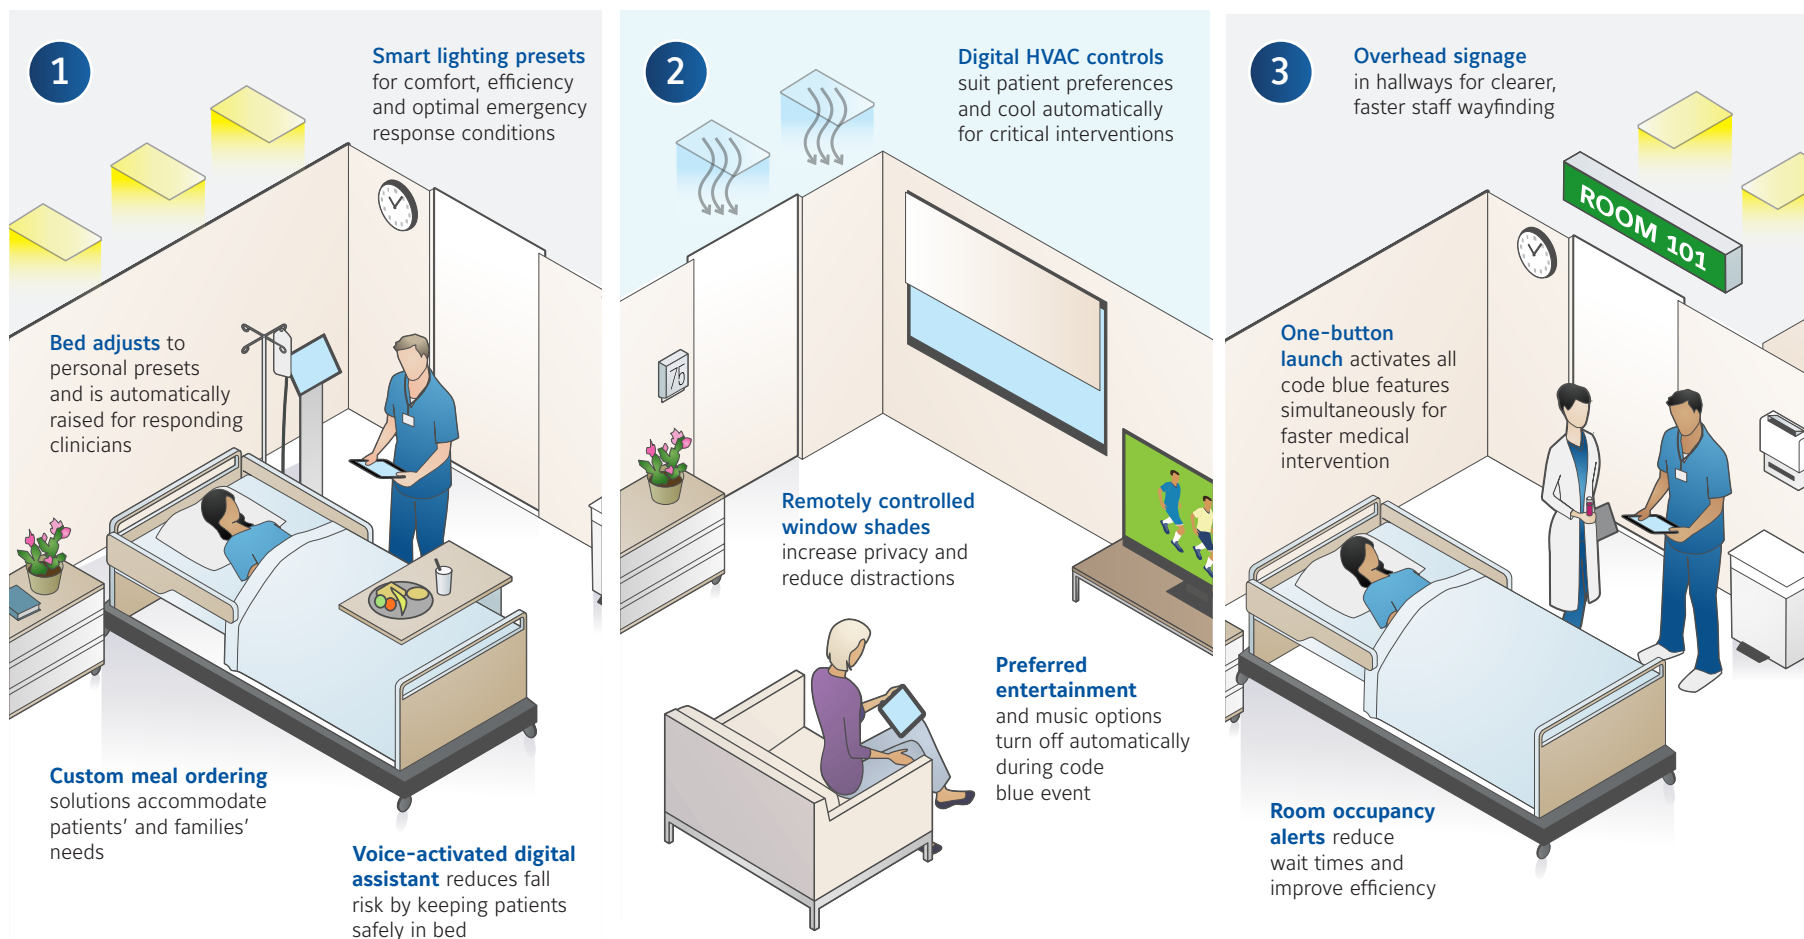

Room to Innovate

When patient safety and wellness are at stake, our advanced digital controls are more than an extra set of hands. They've got brains, too.

Patient room optimization is designed to bring greater comfort and convenience to hospital care – but the benefits extend far beyond the patient experience. The same suite of digital solutions can also optimize the response environment for code blue intervention and set the stage for better clinical outcomes.

OpenBlue Patient Room Optimization and Code Blue Optimization benefit all stakeholders: patients and families, clinicians and staff, IT and facilities management.
